

Department: School of Business

Course Name Finance

Hours per week 3

Number of Credits 3

Course Description This course encourages students to understand the connection between theoretical finance concepts and principles and their real-world application. They will learn more about financial valuation approaches related to cash flows, stocks and bonds. Furthermore, they will learn about financial management relating to capital budgeting, performance of investment, long-term financing, and short-term financial management. In addition, they will learn an analytic framework that uses basic principles to organize their thinking about the structure of corporate finance.
